AMENDMENT

Commissioner for Patents
Box DAC
Washington, D.C. 20231

Sir:

In response to the Office Action dated July 30, 2002, please amend the above-identified patent application as follows:

IN THE CLAIMS

1. (twice amended) A method for detecting faults in a transducer including a secondary winding having at least two voltage outputs, the transducer being electrically connected to a logic circuit, said method comprising the steps of:

summing the voltage outputs to obtain a summed voltage value;

determining a difference between a current value of the summed voltage value to a reference value; [and]

if an absolute value of the difference between a current value of the summed voltage value and the reference value exceeds a freeze threshold, then maintaining the reference value constant; and

detecting faults in at least one of a rotary voltage differential transducer (RVDT) and a linear voltage differential transducer (LVDT) based on the determined absolute value.
